

Who we are

IUCN is the leading organisation bringing together knowledge, science and data on the relationship between food and agricultural systems and conservation. The global Food and Agricultural Systems team works, in close collaboration with IUCN's members and commissions, to drive the transformation of food and agricultural systems, helping to achieve IUCN's long-term vision of a "just world that values and conserves nature".

Examples of our catalytic roles

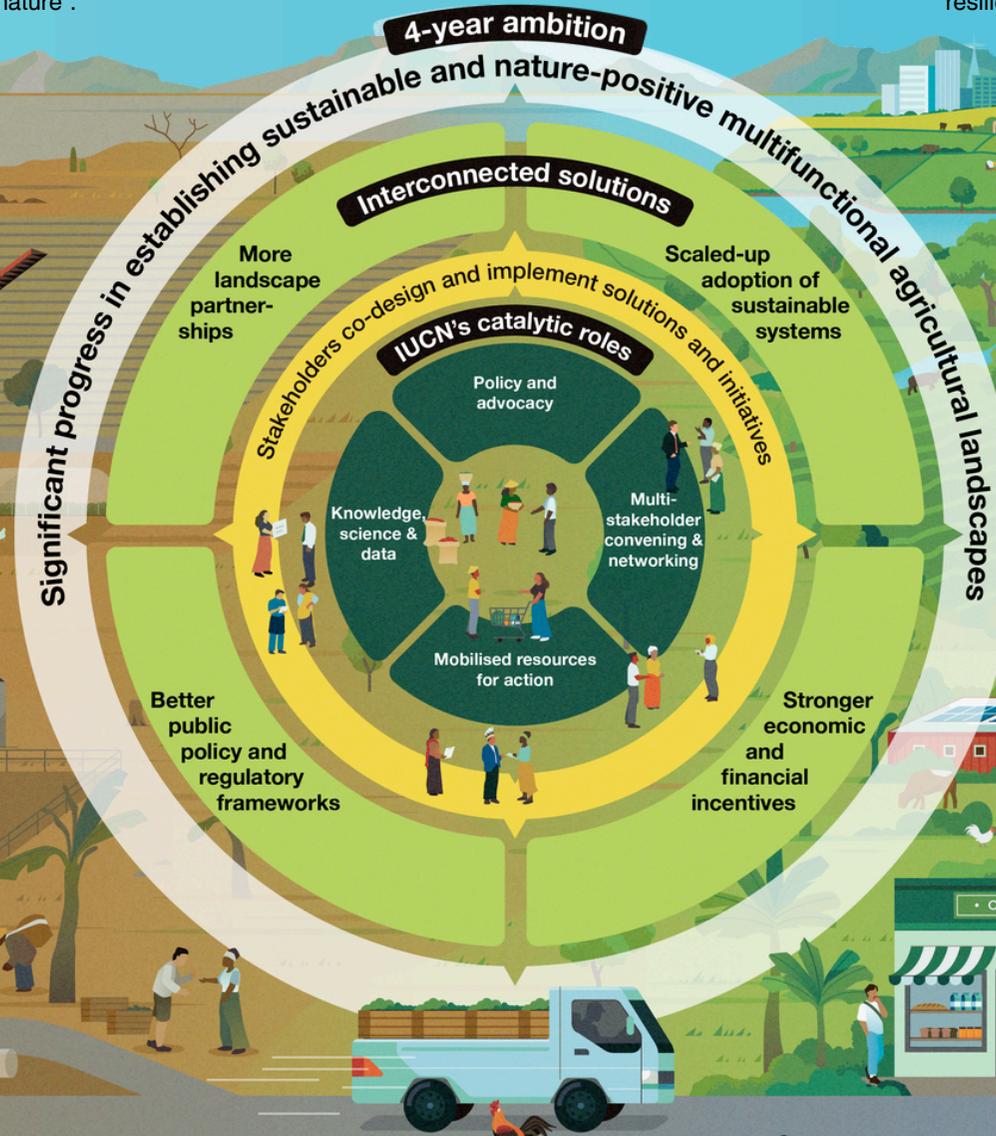

- **Multistakeholder convening & networking:** Building understanding and consensus between agriculture and conservation through [Common Ground Dialogues](#).
- **Policy and advocacy:** Advocating for direct climate and nature finance for Forest and Farm Producers Organisations.
- **Knowledge, Science & Data:** [Agriculture & Conservation Flagship Report](#) and [Land Health Monitoring Framework](#).
- **Mobilised resources for action:** Driving the transition to regenerative food and agricultural systems through shared narratives and outcomes-based frameworks.

Vision

Catalyse food and agricultural systems that value and conserve nature, while safeguarding human wellbeing and societal benefits

Our theory of change

IUCN drives change in Food and Agricultural Systems by catalysing action among diverse stakeholders. Solutions are co-designed and implemented across four interconnected areas, aligning with our four-year ambition. This collaborative process transforms food and agricultural systems towards a more sustainable, equitable and resilient future.

Our partnerships & coalitions

- [Agroecology Coalition](#)
- [Coalition of Action 4 Soil Health](#)
- [One Planet Network Sustainable Food Systems Programme](#)
- [The Forest and Farm Facility](#)
